RED FOUNTAIN™

Use Red Fountain to enhance native gardens!

“Lose the lawn and turn your front yard into a modern native garden with style and street appeal...create a low maintenance native garden that looks terrific all year round.”

Better Homes & Gardens use of Red Fountain™ was an excellent choice for their modern native garden make-over; once established Red Fountain™ is tough and drought tolerant, and looks good for 365 days a year.

This article demonstrates that the use of non-native, water-wise, easy-care plants like Red Fountain add colour and form to enhance native gardens.

Use this magazine and TV coverage to promote Red Fountain as a great water-wise alternative for use in native gardens.

***NB. Recommend the use of a slow release complete fertiliser instead of the low pH fertiliser used on natives; also indicate the need to ensure that Red Fountain does not dry out before it becomes established.**

Stock is available right **NOW**, so please give me a call (03) 9737 9568 if you require grower/supplier contact details.

Regards,
Corrinne
